<b>Time taken</b>	6 mins 23 secs
<b>Marks</b>	6.00/10.00
<b>Grade</b>	<b>60.00</b> out of 100.00

**Question 1**

Complete

Mark 1.00 out of 1.00

What is wrong with this Runnable usage?

```
Runnable r = () -> {  
    Thread.sleep(1000);  
    System.out.println("Done");  
};  
new Thread(r).start();
```

- ☒ a. Thread.sleep must be inside try-catch block
- ☐ b. No problem
- ☐ c. Multiple threads will be created
- ☐ d. Compile-time error due to missing return

**Question 2**

Complete

Mark 0.00 out of 1.00

What happens in this code?

```
ExecutorService executor = Executors.newSingleThreadExecutor();  
Future<String> future = executor.submit() -> {  
    throw new RuntimeException("Error occurred!");  
});  
future.get();
```

- ☐ a. Thread terminates silently
- ☐ b. No Exception is thrown
- ☐ c. ExecutionException is thrown when get() is called
- ☒ d. Future returns null

**Question 3**

Complete

Mark 0.00 out of 1.00

What will be the output?

```
class MyCallable implements Callable<String> {  
    public String call() {  
        return "Callable";  
    }  
}  
  
public class Test {  
    public static void main(String[] args) throws Exception {  
        FutureTask<String> task = new FutureTask<>(new MyCallable());  
        new Thread(task).start();  
        System.out.print(task.get());  
    }  
}
```

- ☐ a. Callable
- ☒ b. Compile-time error
- ☐ c. null
- ☐ d. Runtime exception

**Question 4**

Complete

Mark 0.00 out of 1.00

What happens for the following code?

```
Callable<String> c = () -> {  
    Thread.sleep(2000);  
    return "Result";  
};  
  
ExecutorService executor = Executors.newFixedThreadPool(1);  
Future<String> future = executor.submit(c);  
System.out.print(future.get(1, TimeUnit.SECONDS));
```

- ☐ a. ExecutionException
- ☒ b. "Result" will be printed
- ☐ c. TimeoutException
- ☐ d. IllegalStateException

**Question 5**

Complete

Mark 1.00 out of 1.00

What will be the output of the following code?

```
class MyRunnable implements Runnable {  
    public void run() {  
        System.out.print("Runnable");  
    }  
}  
  
public class Test {  
    public static void main(String[] args) {  
        Thread t = new Thread(new MyRunnable());  
        t.start();  
    }  
}
```

- ☒ a. Runnable
- ☐ b. Runtime exception
- ☐ c. No output
- ☐ d. Compile-time error

**Question 6**

Complete

Mark 1.00 out of 1.00

Identify the problem in the following code:

```
class MyTask implements Runnable {  
    public String run() {  
        return "Hello";  
    }  
}
```

- ☐ a. Infinite loop
- ☒ b. Compile-time error because Runnable.run() must return void
- ☐ c. Runtime exception
- ☐ d. Valid code

**Question 7**

Complete

Mark 1.00 out of 1.00

What will happen when the following code is executed?

```
class MyCallable implements Callable<Integer> {  
    public Integer call() {  
        return 100;  
    }  
}  
  
public class Test {  
    public static void main(String[] args) {  
        ExecutorService service = Executors.newSingleThreadExecutor();  
        Future<Integer> future = service.submit(new MyCallable());  
        service.shutdown();  
    }  
}
```

- ☐ a. call() will never be executed because get() is missing.
- ☐ b. call() will throw an exception.
- ☒ c. call() will still be executed even without future.get().
- ☐ d. Compile-time error.

**Question 8**

Complete

Mark 0.00 out of 1.00

In this code, what type does the Future hold?

```
Future<?> future = executor.submit() -> System.out.println("Task");
```

- ☒ a. Future<Void>
- ☐ b. Future<Integer>
- ☐ c. Future<Object>
- ☐ d. Future<String>

**Question 9**

Complete

Mark 1.00 out of 1.00

In the following code, how many threads are created?

```
public class Test {  
    public static void main(String[] args) {  
        ExecutorService service = Executors.newFixedThreadPool(5);  
        for (int i = 0; i < 10; i++) {  
            service.submit(() -> System.out.print(Thread.currentThread().getName() + " "));  
        }  
        service.shutdown();  
    }  
}
```

- ☐ a. 15
- ☒ b. 5
- ☐ c. 10
- ☐ d. Depends on JVM

**Question 10**

Complete

Mark 1.00 out of 1.00

```
ExecutorService service = Executors.newFixedThreadPool(2);  
Future<Integer> future1 = service.submit(() -> 1);  
Future<Integer> future2 = service.submit(() -> 2);  
System.out.print(future1.isDone() + " " + future2.isDone());  
service.shutdown();
```

At the point of printing, what is most likely?

- ☐ a. true true
- ☐ b. false false
- ☐ c. true false
- ☒ d. Any combination depending on timing
